Hello World

About Me

Hey, my name is Jarod Colbourne and I'm a first year Computer Science student at Dalhousie University going for my bachelors. I enjoy reading, playing curling and a multitude of video games.

Extra Information

I have current interests in programming and hope in the future to solve many problems with the use of programming. I also have some interest in game development and how the behind the scenes of game development works.

My Hobbies

Splatoon 3

I've been playing Splatoon for awhile and have been enjoying playing it since its release. This video is back from a year ago when I made a team with my friend so that we could all play together. Currently I'm just playing it for fun whenever I get the chance trying to improve my skills.
Geometry Dash

This game is just a simple rhythm game that I have been playing on and off to improve my reaction skills. I would say I'm decent at it but also that I am improving every and getting better at how to read the levels. One cool thing about the game is that it still gets updates from time to time and that the player base is still pretty active.

Minecraft

This game I have played for years and have mostly made it my main game to play for atleast 6 years now. I enjoy the creative aspect of it and the exploration, but also that its just a really enjoyable game that I could use to express myself and create anything that I wanted. Here is an Song from minecraft which I enjoy.

Curling

Something else I do most winters is curling. I've been doing it for the last 5 years and enjoy it a lot and play it with my team. I've also played in some tourneys from High School and outside to and won one too. But right now I mostly play it casually since I don't have as much time to focus on it as before.

Education

Base Information:

I have a high school Diploma from Millwood High School and while I was there I took, Chemestry, Physics, and Calculus for some of my classes. Now I'm currently going for my Bachelor in Computer Science. My current class I am taking right now are a programming class, a web development class, a Data Science class, and lastly a Discrete Math course.

Goals

My current goals are to pursue a career within the field of computer science. But before that I want to get my Bachelors in Computer Science and hopefully do some Co-op placements to get used to different workplaces. Ontop of that I would love to expand my knowledge of programming and hardware, and even do something within the field of Chemistry.

Programming Experience

Work Experience

- Java
- Python
- C
- C#
- HTML
- CSS
- Atlantic Gardens Inc. (3 years)
